

What is Compete McGill?

Compete McGill, founded in 2018, is McGill University's competitive programming club. We run weekly training sessions, write our own contest problems, and register McGill's teams for competitions like the ICPC. Our members range from complete beginners to ICPC regional competitors, and our community Discord counts more than 1,500 people.

Our goal is to give McGill students a place to train and compete through the whole school year. In the fall we run seven events, including NP-Compete, the IEEE's 24-hour IEEEExtreme competition, and two official ICPC contests hosted at McGill: the North America Qualifier and the Northeast North America Regional. Winter brings our AI bot competition and a second round of mock interviews. The weekly training sessions continue through both semesters.

Why competitive programming?

A contest gives students five hours and problems they have never seen before. A solution either passes every test or it fails, so there is no room for almost-right code. To score, students have to break an unfamiliar problem into pieces, choose an approach that will work, and write code that runs correctly the first time. Sponsoring us puts your company in front of students who practice weekly.

Who participates?

Last fall's NP-Compete drew 190 students on 93 teams, and we expect at least that many this year. Some are first-years who just finished their first programming course and joined our beginner track. Others have spent years on Codeforces and are training for McGill's ICPC teams. Almost all study computer science, software engineering, or math. Most are looking for internships or full-time roles.

What are we raising money for?

Participation is free for every event except FizzBuzzed, because cost should never keep a student from competing. To make that possible, we need to cover food on contest days, prizes, printing, and venue costs for the competitions we host on campus. All contributions go directly into the events, and support can come as cash or as donated food, prizes, or software licenses.

About us

The club is run entirely by students. We organize the training and write the problems, and last November we arranged the on-campus site where McGill's teams competed in the ICPC Northeast North America Regional. This year's co-presidents are Ziang Wang, Eric Deng, and Edison Thai. Contact details are on the last page.

Fall 2026 events

One sponsorship covers every event in both semesters, and sponsors are credited at each one.

September	Online Mock Interviews Students practice technical interviews with industry engineers on a live coding pad, with feedback afterward. Sign-ups open Aug 31, and sessions run through the month. Free for students, and sponsors are welcome to send interviewers.
Weekly, Sept–Nov	Beginner & Advanced Training Sessions Two weekly tracks. Beginners build the fundamentals that show up in technical interviews. The advanced track digs into harder contest topics and trains for the ICPC.
Sat, Sept 26	NP-Compete Our own ICPC-style contest: teams of up to three, problems written by our members, a live scoreboard, food, and prizes. Last year, 190 students competed on 93 teams. Title sponsorship is available.
October, TBA*	ICPC North America Qualifier McGill hosts an official site of the NAQ, the first stage on the road to the ICPC World Finals.
Sat, Oct 31	IEEEEXtreme The IEEE's global 24-hour competition. McGill's teams compete from campus against thousands of teams worldwide.
November, TBA*	ICPC Northeast North America Regional The next stage after the qualifier. We arrange the on-campus site for McGill's teams.
Thu, Nov 12	FizzBuzzed Our season-closing contest: teams solve short coding problems between rounds of drinks, with prizes for the winners. Low stakes and very beginner-friendly.

* ICPC sets the exact Qualifier and Regional dates. We will pass them on to sponsors as soon as they are announced.

Winter 2027 events

January

Online Mock Interviews

A second round of the September sessions. Students practice with industry engineers on a live coding pad, and sponsors are welcome to send interviewers.

Weekly, Jan–Mar

Beginner & Advanced Training Sessions

Both weekly tracks continue through the winter, picking up where the fall sessions left off.

Feb–Mar, TBA*

AI Bot Competition

Our winter flagship. Students write programs that play a classical game against each other, ending in a live final with food and prizes. Our last poker bot tournament drew around 100 competitors. Title sponsorship is available.

TBA

Sponsor Sessions

Platinum sponsors can run an evening with our members: a tech talk, a game night, or a challenge of your design. We handle the room and the audience; you bring the event.

* We set exact winter dates once the university confirms the semester's room bookings, and pass them to sponsors as soon as they are set.

Sponsorship

Each tier covers every event and training session in both semesters, September through April, with one agreement and one invoice. Higher tiers mainly add recruiting access: resumes and time in front of students. Platinum is capped at two sponsors. Prices are in CAD, and we are happy to build a custom package around any budget.

	BRONZE \$1,000	SILVER \$3,000	GOLD \$5,000	PLATINUM \$10,000+
Credited at every event: website, slides, openings, and social media	✓	✓	✓	✓
Logo on event posters and marketing		✓	✓	✓
Your merchandise distributed at events		✓	✓	✓
Job postings shared to our Discord		✓	✓	✓
Host a tech talk or workshop			✓	✓
Resume book after each semester's events			✓	✓
Name an award at one of our contests			✓	✓
Resume book before each semester's events				✓
Introductions to top contest finishers who opt in				✓
Run your own event with our members				✓
Title sponsorship of a flagship event. Your team presents the awards				✓

Single-event sponsorship

If a full-year package is more than you need, you can sponsor individual events instead:

- **Mock interview partner (no cost).** Send your engineers as interviewers in September and January.
- **NP-Compete food sponsor (\$600).** Feed the competitors, with your branding at the food stations.
- **IEEEEXtreme fuel station (\$300).** Food and drinks for McGill's teams through the 24-hour competition.
- **FizzBuzzed co-host (\$500).** Co-host the night with us. Prizes are awarded in your name.
- **AI Bot Competition food sponsor (\$500).** Feed the competitors through the tournament and the live final.
- **Prize sponsor (donation).** Tech gear, gift cards, subscriptions, or licenses awarded to contest winners at any event.
